

**ESO 202A/204: Mechanics of Solids (2016 -17 II semester) Solution of Assignment No. 9**

**9.1**

$$I_{zz} = a^4/48$$

$$\text{Area of the shaded portion} = \frac{1}{2} (a-2y) (a/2 - y) = \frac{1}{4} (a-2y)^2$$

$$\text{CG of the area from NA} = y + \frac{1}{3} (a/2 - y) = (1/6) (a+4y)$$

$$\text{Therefore } Q = \frac{1}{4} (a-2y)^2 \cdot \frac{1}{6} (a+4y), \quad b = (a-2y)$$

$$\tau_{xy} = \frac{VQ}{bI_{zz}} = \frac{2V(a-2y)(a+4y)}{a^4}$$

$$\text{For } \tau_{xy} \text{ to be minimum } \frac{d\tau_{xy}}{dy} = 0 \Rightarrow y = a/8$$

$$\tau_{xy, \max} = 2.25 V/a^2$$

$$\tau_{xy, \text{NA}} = 2.0V/a^2$$

**9.2**

$$I_{zz} = \frac{10 \times 100^3}{12} + 90 \times \frac{10^3}{12} = 840000 \text{ mm}^4$$

At level AB,

$$Q = 10 \times 45(22.5 + 5) = 12350 \text{ mm}^3$$

$$b = 10 \text{ mm}, 100 \text{ mm}$$

$$\tau_{xy} = \frac{10000 \times 12350}{b \times 840000} = 14.7 \text{ MPa and } 1.47 \text{ MPa}$$

At the neutral axis:

$$b=100\text{mm}$$

$$Q=12350+100\times 5\times 2.5=13600\text{mm}^3$$

$$\tau_{xy} = \frac{10000 \times 13600}{100 \times 840000} = 1.62 \text{ MPa}$$

9.3

$$I_{zz} = 4 \left[ \frac{50 \times 100^3}{12} + 50 \times 100 \times 175^2 \right] + \frac{25 \times 450^3}{12} = 8186.7 \times 10^5 \text{ mm}^4$$

$$(i) \quad \text{for bending } M_{\max} = \frac{\sigma_{xx \max} I_{zz}}{y} = \frac{10 \times 8186.7 \times 10^5}{225} \text{ Nmm}$$

$$= 36.4 \text{ kNm}$$

$$(ii) \quad \text{for shear in wood ( Web portion)}$$

$$Q = 125 \times 100 \times 175 + 125 \times 25 \times 62.5 = 2385000 \text{ mm}^3$$

$$V = \frac{\tau_{xy} I_{zz} b}{Q} = \frac{0.8 \times 8186.7 \times 10^5 \times 25}{2385000} = 6870 \text{ N}$$

(iii) for shear in glue joint  $b=100\text{mm}$   $Q=50 \times 100 \times 175=875000\text{mm}^3$

$$V = \frac{0.4 \times 8186.7 \times 10^5 \times 100}{875000} = 37500 \text{ N}$$

Thus, maximum allowable shear force  $= 6870\text{N}$

Maximum allowable bending moment  $= 36.4\text{kNm}$

9.4

$$\bar{y} = \frac{360 \times 30 \times 345 + 300 \times 30 \times 180 + 90 \times 30 \times 15}{360 \times 30 + 300 \times 30 + 90 \times 30} = 240 \text{ mm}$$

$$I_{zz} = \frac{360 \times 30^3}{12} + 360 \times 30 \times 105^2 + \frac{30 \times 300^3}{12} + 30 \times 300 \times 60^2 + \frac{90 \times 30^3}{12} + 90 \times 30 \times 225^2 = 3.56 \times 10^8$$

$$I_{zz} = 3.56 \times 10^8 \text{ mm}^4$$

(i) = Top flange and web junction:

$$Q = 360 \times 30 \times 105 = 1134000 \text{ mm}^3$$

$$b = 360 \text{ mm}, 30 \text{ mm}$$

$$\tau_{xy} = \frac{120 \times 10^3 \times 1134000}{b \times 3.56 \times 10^8} = 1.05 \text{ MPa and } 12.7 \text{ MPa}$$

(ii) Neutral Axis:

$$Q = 1134000 + 30 \times 90 \times 45 = 1255500 \text{ mm}^3$$

$$\tau_{xy} = \frac{120 \times 10^3 \times 1255500}{30 \times 3.56 \times 10^8} = 14.1 \text{ MPa}$$

(iii) Bottom flange and web junction:

$$Q=30 \times 90 \times 225 = 607500 \text{ mm}^3$$

$$b=90 \text{ mm}, 30 \text{ mm}$$

$$\tau_{xy} = \frac{120 \times 10^3 \times 607500}{b \times 3.56 \times 10^8} = 2.27 \text{ MPa and } 6.812 \text{ MPa}$$

## 9.5

$$M=96 \text{ kNm} \quad V=32 \text{ kN}$$

$$I_{zz} = \frac{150 \times 300^3}{12} - \frac{140 \times 260^3}{12} = 13250 \times 10^4 \text{ mm}^4$$

$$(i) \quad \text{At } y=150 \text{ mm}, \tau_{xy}=0$$

$$\sigma_{xx} = -\frac{96 \times 10^6 \times 150}{13250 \times 10^4} = -108.6 \text{ MPa}$$

Since shear stress is zero, these are principal stresses.

$$(ii) \quad \text{At NA: } \sigma_{xx}=0;$$

$$Q=150 \times 20 \times 140 + 10 \times 130 \times 65 = 504500 \text{ mm}^3$$

$$b=10 \text{ mm}$$

$$\text{therefore, } \tau_{xy} = \frac{32 \times 10^3 \times 504500}{10 \times 13250 \times 10^4} = 12.2 \text{ MPa}$$

$$(iii) \quad \text{At } 50 \text{ mm from NA:}$$

$$\sigma_{xx} = \frac{50}{150} (-108.6) = -36.2 \text{ MPa}$$

$$Q=150 \times 20 \times 140 + 80 \times 10 \times (40+50) = 492000 \text{ mm}^3$$

$$\tau_{xy} = \frac{32 \times 10^3 \times 492000}{10 \times 13250 \times 10^4} = 11.9 \text{ MPa}$$
